

## What Massage Can Do For You

### Beyond Pain Relief, Massage is Valuable for Preventive Care

Karrie Osborn

*This article first appeared in the Summer 2013 issue of Body Sense.*

Whether it is an aching back, recovery from an injury, a case of carpal tunnel syndrome, or a host of other debilitating physiological conditions, there's no doubt massage and bodywork works to relieve pain. But once your therapist has helped you tackle your pain, do you quit calling? When the pain is gone, are you gone, too?

Massage therapy is highly effective for pain relief, but it is an amazing preventive therapy as well. Massage helps build and maintain a healthy body (and mind), it combats stress, and it works to

Massage can play an important role in a good health-care regimen. Just as you eat healthily, exercise regularly, and take your vitamins to ward off illness and maintain a fit body, you should consider making frequent massage a part of your wellness lifestyle.

According to Benny Vaughn, a sports massage expert in Fort Worth, Texas, one of the benefits of consistent and regular massage therapy is better flexibility. "This happens because regular and structured touch stimulus enhances the nervous system's sensory and spatial processing capacity," he says. "That is, the person becomes more aware of her body's movement in space and becomes more aware of tightness or

Massage helps you maintain a healthy body.

keep the immune system strong. In short, massage can keep on working for you, even after the pain is gone.

#### MASSAGE FOR WELLNESS

If it's been a while since you booked your last massage--because your pain is no longer an issue or your injury is fully rehabbed--you might want to consider massage for preventive care.

pain long before it reaches a critical point of mechanical dysfunction."

As a preventive measure, frequent massage puts you more in tune with your body. "The consistency of massage therapy over time creates a cumulative stress-reduction effect," Vaughn says.

"The person becomes acutely aware of stress within her body long before it can create stress-driven damage."

And the more massage you receive, the more benefits you reap. "Massage therapists know that people who get massage regularly demonstrate greater improvement and notice a reduction in pain and muscular tension, as well as an improvement in posture," says Anne Williams, author of *Massage Mastery: From Student to Professional* (Lippincott Williams Wilkins, 2012).

"People regularly make a commitment to fitness," Williams says. "People regularly make a commitment to changing their diet. The difference they'd experience if they regularly made a commitment to massage is mind-blowing."

### STRESS IS A KILLER

Stress is more than just a word we throw around to describe the nature of our hectic day. Today, we understand that stress kills.

According to the Benson-Henry Institute for Mind Body Medicine, 60-90 percent of all US medical visits are for stress-related disorders. Chronic pain, headaches, heart disease, hypertension, and ulcers can all be wrought from stress. Many would argue that the best benefit of massage is its ability to reduce the stress in our lives.

From the perspective of daily living, think about the stress you felt at today's meeting--now it's hiding in your neck. Tomorrow that can turn into stiffness and eventually begin to affect other parts of your body. If you see your massage therapist for your regular session this week, the chances are good you won't reach the tipping point. Think of massage and bodywork as a way to rebalance your body.

Noted researcher Tiffany Field and her colleagues from the Touch Research Institute at the University of Miami School of Medicine report that massage causes positive biological changes when it comes to stress. Through the course of more than 20 studies, these scientists found that massage decreases cortisol (a stress-derived hormone that negatively affects immune function and kills our immune cells) and increases dopamine

and serotonin (the neurotransmitters most associated with emotional well-being).

Add to this the research that shows massage can lower your heart rate and decrease your blood pressure, and you have a mighty effective, nonpharmacological, stress-fighting tool that's about as natural as natural can get.

### A ONE-HOUR VACATION AND SO MUCH MORE

You may no longer need to rehab that knee or work the scar tissue from your surgery, but don't forget about everything else massage can do for you. Massage is the entire package, helping to heal body, mind, and spirit. Think of it as a one-hour vacation with amazing return on investment.

Whether it be maintaining joint

flexibility, managing blood pressure, or enhancing immunity, massage works. From repair to relief and from recovery to relaxation, massage is a magnificent piece of natural medicine you should always have as part of your health-care routine.

Regular massage helps reduce stress and improve your quality of life.

# Cultivating a Gardening Habit

## Discover the Health Benefits of Yard Work

Feeling the need to exercise, clean up your diet, meditate? Want to be more creative, get out and meet people, enjoy the outdoors, and slow down? There's one activity in which you can accomplish all of these objectives: gardening.

### ENCOURAGING EXERCISE

Studies show that vigorous digging burns 500 calories an hour, weeding burns 210 calories, and mowing the lawn burns 400 calories. As a moderate exercise, gardening has been found to decrease the risk of heart disease and diabetes, and a study at the University of Arkansas found that gardening was almost as effective as weight lifting in reducing the risk for osteoporosis in women. So instead of taking that indoor aerobics class this summer, try mowing the lawn or planting an herb garden.

As with any exercise regimen, the key is to start at a comfortable pace and gradually work your way up to longer, more difficult activities. Your heart rate should be about the same as when you

take a brisk walk.

### IMPROVING YOUR DIET

Gardening will also likely help you eat better. Research shows that people who grow gardens eat more vegetables and fruits than those who don't. Growing fresh herbs, even in a container on the deck or balcony, is another great way to add flavor and freshness to home-cooked meals and an incentive to try new recipes.

### BOOSTING YOUR SOCIAL LIFE

Gardening can also be quite social. Whether at a garden club, a community garden, or an online forum, people love to share ideas, solve common problems, and connect through mutual interests.

### EASING STRESS

And finally, gardening is a great way to manage stress. Spending time outside and tuning in to the rhythms of nature, we're reminded to be patient, slow down, and breathe the fresh air. Whether growing flowers, vegetables, or

herbs, a garden reminds us of our connection to life and the abundance that nature so freely gives.

# The Sunshine Vitamin

*Shelley Burns*

In the world of skin health, we focus on ways to improve skin quality. We work to prevent acne, cellular damage, dryness, and wrinkles. It is less common to discuss how a skin-care strategy may increase risk of developing other health conditions.

Skin cancer is one example. To prevent skin cancer, we protect ourselves with sunscreen--especially during the summer months. But by using sunscreen we are blocking the absorption of vitamin D, the "sunshine" vitamin.

Vitamin D is fat soluble and contains powerful antioxidant and anticarcinogenic properties that can prevent premature aging and cellular damage. Solid research indicates that vitamin D plays a role in reducing the risk of cancer, specifically breast, colon,

and prostate cancers. Vitamin D has been associated with preventing diabetes by reducing insulin sensitivity. It also improves heart health, reduces the risk of multiple sclerosis, strengthens bones, and decreases the effects of seasonal affective disorder.

Vitamin D can help resolve skin conditions like psoriasis, as it plays a role in skin cell regulation, including cell turnover and growth. Vitamin D can be effective in reducing the itching and flaking associated with this disorder. Ultraviolet B (UVB) treatments have long been used successfully in treating psoriasis because UVB produces vitamin D in the body.

Getting between 5-10 minutes of direct sun exposure daily on the arms, face, hands, and back (without sunscreen) can

provide enough vitamin D to meet your daily requirements, though sun exposure does present a risk. Because it is difficult to obtain enough vitamin D through food, many prefer to use supplements. Research on the health benefits of ingesting vitamin D led experts to advise an intake of 25-50 micrograms daily.
